

Banas Porcelain®

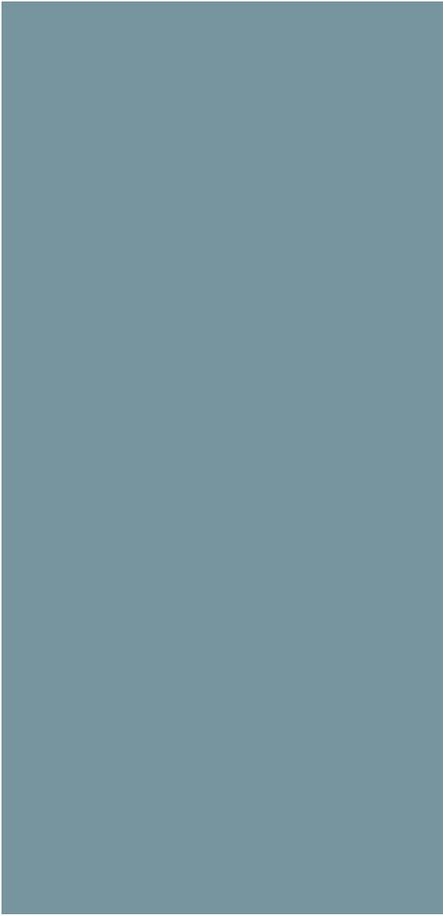

redefining PORCELAIN

be inspired

VITA COLLECTION

MADE IN ITALY

the beauty of porcelain

At Banas Porcelain, quality and safety have always been at the forefront in our assortment. Our collection of Italian porcelain is a perfect example of form and function coming to fruition.

A product that can stand the test of time. Fade and frost resistant, exceptional load bearing capacity, and a wide variety of colours to choose from. This porcelain works well with multiple Banas stone applications and complements every landscape.

sustainable elegance

OUR COMMITMENT TO SUSTAINABILITY

Up to 90% of recycled content in every slab

Eco-friendly construction prevents emitting harmful substances into the environment

LONGEVITY

The natural properties of our Italian porcelain pavers provide optimal durability, impermeability, and a high load capacity.

The surface finish offers a consistent aesthetic that is UV Resistant, while offering resistance to salt and the elements, and permanent staining that can occur with more permeable stone options.

EASY TO MAINTAIN

No need for annual sealing. Porcelain is virtually maintenance-free. Simply wash the surface dirt that accumulates seasonally with a mild detergent.

ECO-FRIENDLY DETERGENT

Banas has designed a line of eco-friendly care products for gentle cleaning of multiple stone surfaces - a great complement to the porcelain collection!

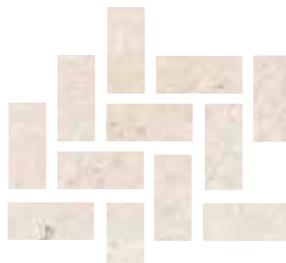

EASY TO INSTALL

Banas VITA PORCELAIN pavers offer the flexibility to be installed with both dry-lay and wet-lay methods while achieving optimal performance for any application. Pattern, existing site and location all play into the best installation method for your project. We suggest that you consult a contractor before making this final decision.

CHOOSE A PATTERN THAT WORKS WITH YOUR DESIRED AESTHETIC, SOME OF OUR FAVOURITES:

Subway

Herringbone

Stacked

CHOOSE AN INSTALLATION METHOD THAT WORKS FOR YOUR APPLICATION

Following a dry-lay method is typical of most pavers. This method offers flexibility to reuse and re-lay pavers.

Start with a fixed perimeter and to lay a solid, level, compact base for optimal product performance.

As is typical of most dry lay installations, a level and compact base is key for optimal product performance and ease of installation. There are various methods that can be implemented to achieve the desired results, we recommend that you consult with your local, qualified or Banas Certified contractor to help you make a decision based on your soil conditions and climate.

Wet-lay installation works best when pouring a concrete base or have an existing level concrete base to start with. This type of installation method also offers more permanence, as it is likely mortared to the desired surface.
